

## *XHL-XQD4/1 Liquid Filling And Sealing Machine*

The series of products are mainly used for aseptic filling of serum, cell culture medium, etc. in such industries as medicine, biology, etc. The whole production process is completed under the protection of 100-level laminar flow and aseptic isolation, ensuring aseptic production and conforming to the new version GMP requirements. The production line inherits internationally

advanced technology in its structural principle, and incorporates various patented technologies with independent intellectual property rights. It has reached the advanced level and can replace similar imported products.

#### Technical Parameters:

| <b>Product Model</b>        | <b>XQD4/1</b>               |
|-----------------------------|-----------------------------|
| Production capacity         | 15-20 bottles/minute        |
| Number of filling heads     | 4 heads                     |
| Filling range               | 30-500 ml                   |
| Filling accuracy            | $\leq\pm 0.5\%$             |
| Number of cap taking heads  | 1 head                      |
| Number of cap turning heads | 1 head                      |
| Bottle moving mode          | Round disc positioning type |
| Pass rate                   | $\geq 99.9\%$               |
| Power supply                | 220/380V 50/60HZ            |
| Power                       | $\leq 3KW$                  |
| Compressed air pressure     | 0.4 - 0.6 MPa               |
| Weight                      | 2000 KG                     |
