

High Speed Cartoning Machine

The high speed cartoning machine is an innovative model designed by our company on the basis of introducing foreign technology, and is manufactured according to the requirements of "GMP" in the pharmaceutical industry. With high efficiency and high performance production capacity. The simple appearance design and the rear continuous pushing structure make the operation and maintenance easier; Three equal parts of rotary box opening and two pre forming devices ensure the complete opening and forming of the carton.

The machine is a full-automatic continuous high speed cartoning machine. It is a high-performance product integrating machine, light, electricity and gas. It is suitable for automatic cartoning of aluminum plastic blister plate, bottle, hose, soft double aluminum and bagged articles, and can form a packaging production line with it.

Features:

1. Do not suck instructions without packaging materials, and do not suck cartons without instructions;
2. Stop the machine and alarm if the material is not in place; Automatic alarm and delayed shutdown when there are few cartons in the carton warehouse;
3. Automatic shutdown alarm without instructions for many times;
4. Shutdown alarm for low compressed air and vacuum negative pressure;
5. Rear pushing makes the operation more convenient;
6. The dial scale handwheel can be easily replaced with product specifications;
7. The main drive is equipped with overload protection device;
8. Servo blanking system;
9. All electrical components shall be international brand products;
10. Automatically display the packing speed, alarm fault and count.

Technical data:

product function	Automatic box opening, box loading and box sealing
applicable industry	Food, medicine, daily necessities, cosmetics, etc
production speed	80-120 boxes / min
carton requirements	250-320 g / m ²
gas consumption	25 ~ 40L / M
gas source pressure	0.6 ~ 0.8MPa
