

## ***Semi Automatic Dry Auger Type Powder Filling Machine LG-F01S***

As a machine manufacturer, we are committed to producing machines of higher quality. Semi automatic auger powder filling machine is a new machine launched by the company in combination with the latest technology. Auger type powder filling machine is suitable for weighing and filling various powder and mixed powder like materials, such as additives, fertilizers, flour, coffee powder, milk powder, washing powder, monosodium glutamate, solid drinks, sugar, seasoning and other powder products.

### **Features**

1. The relevant parameters of the machine can be adjusted to meet the requirements of various precision required.
2. Dry auger powder filling machine can be equipped with various configurations, suitable for various bottles, cans and bags.
3. Work with assembly line. The machine can be used in line with the production line to realize automatic control of material level.
4. Auger type powder filling machine adopts step motor. With the use of stepping motor, the product can be filled in a better way, so as to realize no waste of raw materials and maximum saving of materials.
5. The filling motor speed is adjustable. The adjustable speed can meet the requirements of different materials on speed and realize the diversity of packaging materials.
6. Imported stirring motor. Semi automatic auger powder filling machine adopts imported agitator motor, which has low noise, low energy consumption and is suitable for large area use.
7. The photoelectric sensor induces the filling signal. The photoelectric sensor can sense the filling signal of the machine more sensitively and realize more accurate weighing and precise filling.

**Technical Data:**

<b>Model</b>	<b>LG-F01S</b>
Packaging materials	powder, flour
Weighing range	1-5000g
Filling accuracy	1% (different materials vary)
Filling speed	30-45 bags / min
Power supply	220v /50-60HZ
Machine size	3000 * 1060 * 2000mm
