

SD-YYS-185 Eye Drop Filling Sealing Machine

The eye drop filling is mainly made up of bottle setting machine, two-head filling machine, fixing inside lid, outside lid and revolving lid, implicated in the dropping of the fluid eye plastic bottle, glass bottle and mould bottle.

Structure:

1. Bottle setting machine.
2. Two head filling machine
3. Fixing inside lid, outside lid and revolving lid.

Feature:

1. The machine is especially applicable for different shape eye drop bottles, such as plastic bottles: PP, PE, PVC, glass bottle and mould bottle...
2. It has specialized structure for transporting bottles to ensure the transporting stability
3. It is also can be used to filling different-shaped bottles of small dosage such as iodine, tincture and essential balm.
4. During the filling process, the machine can well controlled with the great bottle-in and bottle-out structure, not dropping bottles or nipping bottles.
5. PLC controlled.
6. The Touches part of the liquid medicine is made of 316L stainless material, meet the requirement of GMP.
7. It can work with a bottle-washing machine and the label-attaching machine to form a complete set of produce line.

Technical Parameters:

Filling Capacity	5-30ml
Filling Precision	≤± 0.5%
Filling Production	60-100 bottles/minute
Eligibility rate of inside tuck and outside tuck	≥99%
Power	1.5KW
Amount of Pressing Air	0.6Mpa
