

SGGX-50-500 production line infusion

Described In Detail:

Purpose and introduction:

The production line for the bottle from the machine, drum washing machine, sterilization dryer, filling stopper, disc positioning rotation (rolling) cover machine components, to be completed by ultrasound, water, gas cleaning, drying or sterilization (available sterilizer or tunnel oven), filling, stopper, capping processes, mainly for low-dose infusion, and other production-line solution, and together with the labeling machine composed of an ideal line. The production line designed simple operation, easy maintenance, and full compliance with the new GMP requirements.

Features:

1. Exterior is made of 304 stainless steel, meet the GMP standard. Can be adapted to multi-standard production, filling part of the mining 316L stainless steel.
2. Stable, low noise, accurate filling.
3. Broken bottle is low, product qualified rate, low energy consumption.
4. The entire production line can be stand-alone control and chain of control.

Technical parameters:

- Applicable standard 30-1000ml
- Production capacity of 40-60 bottles / min
- Filling accuracy $\leq \pm 2\%$
- Rotation (rolling) cap rate $\geq 98\%$
- Power 380V/50Hz
- Power of 8 kw
- I Line length $\geq 7m$
