

## *GZJ-50A Metal Tube Filling And Sealing Machine*

GZJ-50A type metal tube filling and sealing machine, mainly used for metal hose for quantitative filling, packaging materials and sealing. Widely used in pharmaceutical, chemical, food, chemical and other industries Product packaging. Such as: ointment, AB glue, adhesive, chloroprene rubber, epoxy, skin cream, hair coloring agent, toothpaste, shoe polish, liquid or paste material filling and sealing. Artificial metal hose into the indexing coil seat (16 stations), using a mechanical driving automatic indexing. Automatic detection, confirmed the tube and inserted correctly, filling system began to automatic measuring and filling, then seventy percent off or sixty percent off two-way sealing, printing batch number, product exit.

### **Feature:**

The filling speed and the measurement precision can be conveniently adjusted, the adjustment of high precision, good stability. Metal hose filling replacement base can be applicable to various specifications of the tail, sealing appearance neat, tight sealing. The machine where the material contact parts are made of high quality stainless steel material.

## Technical Parameters:

Model	GZJ-50A
Voltage	AC 220V $\pm$ 10% 50Hz
Temperature	5~ 50℃
Filling range	5-30 25-125
Measurement error	<2%
Power	1.1kw
Compressed air	0.6--0.7Mpa
Air supply	$\geq$ 0. 2M3/min
Working capacity	10-50 b/min(Adjust)
Machine size	1000*600*1700(mm)
Machine weight	400kg
