

Baby Talcum Powder Drum Filling Machine CK-GZ1/2/4/6FJ

Talcum Powder Filling Machine Introduction:

This talcum powder bottling line is one of the main products of our company, according to the requirements of customers, we have developed a single-head, double-head, four-head and six-head automatic jar filling line, which is specially designed for powder filling in the pharmaceutical, health care products and food industries, such as dry syrup, baby talcum powder.

Combined with different customer needs, the powder drum filling equipment can be matched: feeding (screw, vacuum), automatic bottle sorting, single (double) head plug, screw cap, gland, aluminum foil sealing label, thermal shrinkage, packing, 3D wrapping (with gold wire), packing, etc.

Low Cost Powder Filling Machine Working Flow:

Finishing the bottle→fill the bottle with the top cover (Including: the size of the bottle and the size of the rotary table is matching, weight setting is mainly measured by the number of screw rotation)→screw feeding and mixing→screw metering→filling powder→capping→output

Talcum Powder Filling Machine Technical Features:

This powder drum filling equipment adopts screw filling machine, servo, indexing disc positioning system, touch screen display, PLC control, packaging accuracy and speed has been improved. Suitable for packing all kinds of powder and ultrafine powder materials, effectively solve the dust problem in the filling process.

Powder Drum Filling Equipment Characteristics:

1. The talcum powder filling machine design is reasonable, the replacement of packaging varieties, cleaning is very convenient.

2. Using touch screen display, screen display English working status, operation instructions, simple and intuitive. Packing weight stepless adjustable, operation mode can be arbitrary change, fault alarm prompt.

3. This powder filling machine with lost cost uses PLC control, anti - interference, stable work.
4. Servo drive is adopted for filling, high positioning accuracy, large torque distance, long life and adjustable speed.
5. Various product parameters formula can be stored, can be transferred at any time.
6. By replacing the screw accessories, the talcum powder filling machine can adapt to the packaging of large particles to ultra-fine powder materials. According to different materials can be added with vacuum negative pressure, vibration and other devices.

| Model | CK-GZ1/2/4/6FJ |
|----------------------|--|
| Filling Bottle | PET bottle,glass bottle,etc |
| Measuring range | 1-200g(can custom) |
| Bottle Size | inner \geq Φ 8mm,height \geq 20mm |
| Packing Speed | 10-200bottle/min |
| Filling valve number | 1-6 |
| Voltage | 380VAC/50HZ |
| Power | 1.5-7KW |
| Dimensions | 2000L \times 1000W \times 1850H |
| Weight | 500-1000KG |
| Precision | \leq 100g deviation \leq \pm 1.5g, |
| | \leq 200g deviation \leq \pm 1% |
