

FF-330 Liquid Automatic Filling Machine

The liquid automatic filling machine FF-330 is suitable for various paste such as the water, juice, milk and other pure liquid material from 5ml to 5000ml. The liquid automatic filling machine is easy to clean. We can make 2 filling nozzles, 4 filling nozzles, 6 filling nozzles as you need. We can supply the technology support online and OEM service in advance.

Automatic liquid filling machine is an improved design based on the filling machine series products, and some additional functions are added. Make the product in the use of operation, accuracy error, installation adjustment, equipment cleaning, maintenance and other aspects more simple and convenient.

Automatic liquid filling machine is widely used in daily chemical, grease and other industries, and can fill different high viscosity fluids. The design of the machine is compact and reasonable, the shape is simple and beautiful, and the filling volume is easy to adjust. The filling material is fast and accurate. The pneumatic components of FESTO, AIRTAC and shako of Germany, and electronic control components of delta of Taiwan are adopted with stable performance. Material contact parts are made of 304L stainless steel. Convenient adjustment, no bottle filling, accurate filling volume and counting function. The filling stopper with anti-dripping and drawing, the filling lifting system of anti-foaming products, the positioning system and liquid level control system to ensure the positioning of bottle mouth are adopted.

Technology data sheet:

Machine Model	FF-330					
Filling speed	5-60 bottle /min					
Filling range(ml)	5-100	10-300	50-500	100-1000	500-3000	1000-5000
Air pressure	0.4~0.9mpa					
Filling error	$\leq \pm 1\%$					
Voltage	220V/50Hz or 110V/60Hz (Optional)					
Specification	3000*1500*2000mm					
This machine is a custom machine and requires customers to fill samples.
