

Liquid Filling Machine GYL

Machine Description

1. This machine adopts imported mechanical parts, piston and pot is made of stainless steel and polytetrafluorethylene.
2. New type horizontal design, legerity and convenient, take out material automatically and avoid trouble of frequent putting in material of vertical hopper.
3. Switch function between manual and automatic; when machine is under automatic condition, machine fills continuously automatically with set speed, when machine is under manual condition, operator steps on footplate to realize filing.
4. Cylinder and three-way part adopt cuff connection which is easy to remove. It doesn't need any special tools so it is easy to clean.
5. Anti-leaking filing system: during filing, cylinder moves up and down and drive end ring.
6. Filling speed: 15-30bottles per min.

Technical Parameter

Filling Volume	5-60ml,10-120ml,25-250ml,50-500ml,100-1000ml
Filling Accuracy	≤±1%
Filling speed	Adjustable
Working Method	Pneumatic
Air Source Pressure	0.2-0.6MPa
Contact Part Material	304 / 316L SS
Filling material	cream,liquid detergent
Noise	≤70dB
Pneumatic control or Electric control	Pneumatic
