

SD-HS-25 Tunnel Sterilization Drying Oven

This SD-HS-25 tunnel sterilization drying oven (sterilizing tunnel) is one of the widely used sterilizers in pharmaceutical, chemical, food, sterilizing tunnel petrochemical industry etc. Sterilizing tunnel is used for dry heat sterilization and dehydrogenation of containers, bottles, ampoules bottles, vials and other glass products etc. It is also used for the drying and sterilization of oral liquid, straight-pipe glass bottles and glass containers.

Feature:

1. All made from high-quality stainless steel, as well as the heating pipe.
2. The machine can get to a 100-level purifying standard to ensure your quality requirement.
3. Driving system is stepless speed adjustable, so as to adjust the transport speed to ensure a production requirement as well as sterilization requirement.
4. This machine is auto-temperature controlled, and also PLC controlled.
5. Low noise with high speed wind.

Specifications:

Producing capacity	22000 bottle/hour
Sterilization temperature	70°C~350°C
Width of the transporting belt	400mm
Bottle out temperature	≤ 40°C
Power	22KW 32KW
External size	3600 × 1600 × 2400
