

VCM

Vials Capping Machine

The VCM Series fully automatic closing machines can be used for the implementation of a variety of closing systems.

Precisely operating stations manage the required tasks and offer object-oriented options for every application.

It can be rubber stoppers, drip inserts, pipettes, spray pumps or heads, flared caps, PP caps, screw caps and child-proof caps, overcaps or press seals in a variety of dimensions and shapes.

The modular design of the VCM Series offers versatile combination options for stations and installation. They can also be fitted with pressure crimping and blade sealing stations, or special assemblies, and integrated into existing processing lines.

The main features and options of the OFM systems are:

- Compact design and easy access
- Precise and consistent crimping
- Best protection from the laminar flow and gentle guidance of closures
- Fast size changeovers, virtually tool-free
