

PC2000I-C

Automatic Cap Screwing Machine

Introduction:

PC2000I is an improved product based on the advantages of different capping machines home and abroad. Adopting friction form in screwing, convenient to adjust, the screwing rate can be modulated according to the client output freely, its work efficiency can be enhanced by two times than the crawl forming machine. The machine is designed reasonably, and the structure is compact with high capping rate as well as the cap doesn't nap, running stable and reliable with longer usage life-span, simple operation and convenient servicing. Its control system is controlled by PANASONIC producing the programmable controller of PLC. Frequency timing, reliable running, Adopting international name brand photo-electricity controlling system controlled when bottles are lacking and blocking then cease automatically, having multifold protecting functions, materials touching with bottles conform to the requirements of GMP completely. (the function of PC2000III Frequencyconverted Automatic High Speed Screwing Cap Machine is similar as PC2000I, selecting rising sort cap equipment in case that filling more convenient.)

Main Technical Specifications

Speed of capping: 60~150 bottles/min

Max. 200 bottles/min

Capacity of bottles: 15cc~2000cc

Diameter of caps: μ 19~ μ 65mm

Diameter of bottles: μ 23~ μ 100mm

Net dimensions: 1700mm×750mm×1750mm (W×D×H)
