

Aluminum Cap Capping Machine GHX-0600

The automatic aluminum cover capping machine is mainly used for the sealing of the one-time twist-off aluminum anti-theft cover. The structure adopts a four-claw balanced type head, and the force is evenly applied during sealing; the bottle cap is deformed according to the shape of the bottle mouth first. Then roll the thread and flange sealing function. At the same time, the machine has the characteristics of beautiful appearance, compact structure, reasonable design, stable operation, low noise, fast sealing speed and good sealing quality. It is suitable for mass production of various wineries, beverage factories, brewing plants, pharmaceutical factories and other enterprises. At the same time, the machine has a multi-purpose machine, and the replacement of the head parts can be used for the plastic cover screw cover, the three anti-cover cover, and the chrysanthemum cover gland. The equipment can be equipped with automatic cover and cover system according to customer requirements.

Applicable objects: milk tea, juice drinks, carbonated drinks, alcoholic beverages, oils, hair care products, skin care products, cosmetics, yogurt, fresh milk, sauces, liquid alcohol, oral liquid.

Applicable industries: catering, food, daily chemical, medicine, tobacco and alcohol, chemical, home textile, toys.

This series of capping machines is designed for the sealing of twist-off aluminum anti-theft caps and bottle mouths.

Technical Parameters:

- Covering speed: 20-30 bottles / minute
- Capping speed: 20-30 bottles / minute
- Complete line power: 2KW/220V AC three-phase four-wire power supply
- Air source: 0.5-0.8Mpa
