

NY-L6 Viscous Liquid Automatic Filling Machine for Lubricant, Syrup

NY-L6 viscous liquid automatic filling machine uses a special three-way filling valve, compact and reasonable design, simple and beautiful appearance, easy adjustment of filling volume. Suitable for filling liquid and viscous liquid products like lubricant, syrup, butter, grease, detergent, honey, and washing liquids. This machine adopts programmable control of PLC, and is equipped with a 6-inch touch-screen human-machine interface system, which implements automatic bottle entry, automatic filling, automatic bottle-out, no bottle filling, accurate filling quantity and counting function. Electric appliances and electric components use international brands, ensuring excellent quality and long-lasting stable performance. The machine is equipped with filling holes to prevent dripping and drawing, ensuring no leakage after filling. The submersible filling system is configured to ensure that the filling process does not foam and prevent spillage of the filling. Filling mechanism with plexiglass cover, beautiful dust.

Main Parameters

Model	NY-L6
Filling heads number	6 (4 heads, 8 heads, 10 heads can be customized)
Production capacity	5-15 bottles/minute/head
Filling range	50-500ml; 100-1000ml; 1000-5000ml
Filling accuracy	±1%
Air pressure	0.5-0.7mpa
Gas consumption	400L/t
Machine weight	400kg
Voltage·power	380V 50HZ ·1.5W
