

Boil Bottle Sterilizing Machine

This boil bottle sterilizing machine is mainly used for boil sterilization for ampoules and oral liquid bottles, and it conforms to GMP standards. Bottles are first washed by preheating sprayer, and then they will be automatically conveyed to water channel for boil sterilization whose effects can be better if the ultrasonic waves are used together. Meanwhile, impurities of bottles like dust, sand can also be removed.

Features:

1. Good bottle cleaning capacity, excellent sterilization effects, high productivity, and low broken bottle rate.
2. Many detachable components, and one year of warranty year.
3. Easy to assemble and maintain.
4. On-button operation system makes this boil bottle sterilizing machine easy to control.

Main Parameters:

Production Capacity	2400~3000 bottle/hour
Bottle Size	5ml-30ml straight tube bottle
Rate of Sealing	≥99%
Electric Supply	380V/50hz, 3phase
Power	1. 3kw
Size	1100×1220×1620mm
