

50-250ml Plastic/Glass Bottle Filling Stoppering & Sealing Line

Introduction:

The line comprises SP series bottle conveying machine, YGS series linear filling & stoppering machine and ZD series multi-function cap-installing & sealing machine. It can automatically finish such procedures as bottle-arranging, feeding, filling, stoppering, cap-arranging, cap-installing and sealing. All machines of the line can be used separately.

Two type of self-adhesive labeler, TZJ and XT series, for your selection.

Main technical specification	
Capacity:	30 ~ 80 bpm
Scope of bottle:	50 ~ 250ml plastic/ glass bottle
Scope of stopper:	Butyl rubber stopper
Scope of cap:	Aluminum/ plastic cap
Configuration:	The filling machine is based on one specification.

Applications:

- Sensitive control system, stable performance, easy to operate.
- The drive part of the filling machine is governed by frequency conversion for different requirements of the capacity.
- Bottles are conveyed continuously. No bottle falls or overflows.
- Metering pump of the filling machine is equipped with fine adjustment equipment, which makes it easy to adjust and ensures high filling accuracy.
- Star turntable is easy to use and change.
- Sealing head (cap-rolling head or cap-rotating head) is easy to change for different caps (aluminum cap or plastic cap).
- Adjustable height of the sealing head for bottles of different height.
- All in contact with bottles and liquid is made of high quality AIS1304/AIS1316 stainless steel and other materials permitted by FDA, fully in conformity with GMP regulations.
