

## *Saline bag Packaging Machine*

The Utien DZL thermoforming packaging line is designed for maximum output and used in food industry frequently. The new model of thermoformer redefined high durability and high work efficiency.

### **Features:**

- High efficiency, at least 10000 packages per day.
- Safe and easy to operate with PLC touch screen operating system.
- Outstanding packaging with customized forming mold and functions for automated packaging.
- Provide full after-sale service, engineers are able to service overseas.

**Saline bag Pack:**

More and more plastic saline bags are used in medical industry instead of glass bottles which is more economic and environment friendly. In order to keep the saline bags uncontaminated we use thermoforming flexible packing machine to pack saline bags. It can easily be opened and low weight to carry.

**Thermoforming Technology:**

Advanced thermoforming technology can increase packaging production speed and package quality. It use compressed air and vacuum to help heated film form into different shapes. The bottom mold is totally customizable.
