

Pre-made Bags Granule Packaging Machine GDK-series

This packaging machine adopts a multihead weigher for weighing and measurement, and various numbers of electronic scales are available for selection according to the packaging materials and speed requirements. The loading mechanism adopts a bucket loading machine, which has the functions of automatic filling of material shortage and automatic stop when the material is full.

Features

1. Siemens PLC control system, touchable screen, easy to operate.
2. 10 heads combined scales, wide range of packaging: suitable for granular and blocks of various shapes, status and properties;
3. Conveniently: the replacement of the packing materials can be completed in about ten minutes;
4. Perfect prevention system to ensure performance and not waste bags and materials;
5. The packaging part of the machine is made of stainless steel to ensure hygiene and safety of material;
6. High degree of automation: unmanned in the entire weighing and packaging process;
7. Imported engineering plastic bearings are used, no need to refuel and maintenance-free, reducing pollution of materials.

Technical Data

Filling range	5-1500g
Filling speed	0-40Bags/min
Bag size	L:100-350mm W:80-210mm
Compressed air consumption	0.4 m ³ / min
Voltage/power	380V, 50HZ
Weight	1060KG
Voltage power	1.5KW
Dimensions (mm)	1650(L)*1380(W)*1500(H)
