

DZ-120 Injection Type Cartoning Machine

The equipment is mainly used for automatic packaging of injection drugs in trays or injection in bubble cap board trays and similar specifications' items, and if it can connect the front printing equipment or equipment of making trays connecting printers, this will improve productivity.

Application:

- The speed is regulated by variable frequency and automatic control system.
- The machine adopts man-machine interface operating system, automatically display box speed, quantity and other performance parameters, and also display the fault causes and methods of operation and maintenance.
- It can be implemented that adjust and use of more specifications at the specific confine on the same machine.
- Manual and automatic conversion.
- It can print three batch numbers on the box and also have the functions of print serial numbers.
- Incorporates automatic inspection system and has the functions of automatic suspension and removal of non-conforming products.

Technical Parameters:

Speed	70-100pcs/min
Specification of paper carton	(100-160)×(70-130)×(12-50)mm
Specification of the manual	(80-160)×(90-190)mm
Power supply	380V 50Hz
Total power	1.2kw
Compressed air pressure	≥0.6Mpa
Overall dimensions	3400 × 1200 × 1600mm
Weight	1000kg
