

Light Inspection Machine

The light inspection machine is specially designed and manufactured according to whether there are defects in the appearance of the bottle after filling. By using LED irradiation on the bottle body, black and white background comparison, operators can clearly see whether there are defects on the outside of the bottle after filling, so as to carry out screening and removal.

The light inspection machine belongs to the electromechanical integration product, the structure design is simple and reasonable, easy to operate, may according to the user's demand, to the productive capacity regulation.

Specifications:

Capacity	40~60 bottles/ Min
Weight	600kg
Dimensions (L*W*H)	1670 × 715 × 1400
Power	400W 220V 50~60 HZ
