

NJP-200 Automatic Capsule Filling Machine

NJP-200 automatic capsule filling machine is a substitute of the semi-automatic capsule filling machine. It can be applied in hospitals, medical research institutes, laboratories, colleges and universities, small pharmaceutical factories and health care plants and is therefore deeply favored by clients

Features:

- The equipment is of small volume, low energy consumption, easy operation and cleaning.
- The equipment is standardized and parts are interchangeable for easy and convenient mold change.
- The cam is designed at the bottom to increase pressure atomizing oil pump, keep the cam groove lubricated, reduce wear and prolong the service life of parts.
- High-accuracy indexer is applied for small vibration and operation noise lower than 80db. Thus, with the vacuum locating device, the capsule probability can reach 99.9%.
- The lower plane of dosing tray is applied as the benchmark for three-dimensional adjustment, uniform gap, narrow filling quantity distribution and convenient cleaning.
- The machine has HMI and perfect functions. When material or capsules are lack or material channel is faulty, the machine will alarm and stop automatically. Besides, it can display the value of capsule metering and cumulative output counting.

Technical Parameter:

Model	NJP-200	
Production speed	200pcs/min	
Filling material	Powder & granule	
Mold hole quantity	2	
Power supply	380V, 50Hz, 3P	
Proper capsule size	00#-4#	
Filling error	±3% - ±4%	
Noise	≤78dB (A)	
Capsule probability	99.9% for empty capsules	
	Over 99.5% for full capsules	
Dimensions	Machine dimensions	750*680*1700mm
	Packing dimensions	1600*1050*1900mm
Weight	Net weight	600kg
	Gross weight	650kg
