

HU-4E Automatic Rotary Capping Machine

HU-4E automatic rotary capping machine integrates bottles arranging, caps covering, screwing and bottles-out process. It has grasping caps and position capping function. In the capping process, there is no bottle injury and no caps injury with high efficiency of caps screwing. The components of HU-4E automatic rotary capping machine has features like long service life, stable operation, low noisy, wide large usage and high capping rate. The speed of the machine is adjustable, which is convenient for assembly line. HU-4E full automatic rotary capping machine is an ideal choice for large and medium-sized packaging workshops.

Main Parameters:

1. The host dimensions (length * width * height): 2400mm * 1300mm * 2400mm
2. Weight: about 1500kg
3. Voltage: AC380V; 50HZ
4. Whole machine power: 3kw
5. Need to prepare gas source: 0.6Mpa clean and stable gas source
6. Number of caps: 4
7. Production capacity: 4500 bottles / hour
8. Applicable bottle type specifications:
Round bottle: diameter 100mm - 200mm height: 200mm - 300mm
Square bottle can be customized (mm): long (100-250) wide (100-200) high (200-300)
9. Applicable cover specifications: height: 25mm - 60mm diameter: 20mm - 80mm
