

Seasoning High Speed Filling Machine

This filling line is a highly automatic and intelligent bottle/can filling equipment developed by our company, which consists of four parts: bottle loading machine, bottle sorting machine, filling machine and capping machine.

The empty bottle is put into the bottle feeding machine manually. The bottle feeding machine feeds the empty bottle into the bottle sorting machine. The bottle sorting machine automatically sorts the bottle into the filling machine. Vibration device can be set in the filling to flatten the materials, and the filled container will enter the capping machine automatically, and the capping machine will automatically trim and press the cover (the bottle cap is put into the hopper manually), thus completing the automatic loading, sorting, filling and capping.

Scope of application:

Granules and powders (such as salt, baby food, puff granules, flour, cereal, etc.).

Technical parameter:

Range	Can be customized according to customer requirements
Speed	20~120 bottle/min
Products	Salt, baby food, puffed granules, flour, cereal, etc
