

## *Horizontal Shrink Wrap Machine for Boxes CK-120*

Horizontal shrink wrap machine is a very popular packaging tool, it is widely used in the laminated shrink wrapping of products, with dustproof, moisture-proof and beautiful appearance, it is one of the necessary packaging forms for middle and high grade products. According to the different products, can be customized shrink wrap machine of different specifications. Simple operation, high production efficiency, saving labor and material costs.

### **Horizontal Shrink Wrap Machine Features:**

- The shrink wrap machine for boxes adopts a full set of automatic control system, PLC control, reduce the mechanical contact, make the system more stable, reliable, easier maintenance.
- Two servo motors provide power, low failure rate and high operating accuracy.
- Color touch screen, bag length, speed and temperature can be adjusted independently, easy to operate and accurate.
- Four thermocouple temperature control module, PID control, heating quickly, can accurately control the vertical and horizontal sealing temperature.
- Equipped with mechanical anti-cutting safety clutch device and electronic anti-cutting device, do not damage the packaging and will protect the horizontal shrink wrap machine.
- The waste recovery device can be added to make the packaged products into three lines after vertical and horizontal sealing shrinkage, namely h-type, which makes the packaging more beautiful.
- The horizontal shrink wrap machine can be equipped with a code or code printer, do not need to use manual.
- The whole process of bag-making, filling, sealing and cutting can be completed automatically with film winding, and the packing speed is fast.
- Tracking mode and fixed length mode can be enabled according to the packaging film.
- The shrink wrap machine for boxes can be used together with the heat-shrinkable furnace or separately.

## Shrink Wrap Machine for Boxes Application Range:

Horizontal shrink wrapping machine is suitable for heat shrink film, suitable for milk single row packaging, different sizes of boxes, cartons, etc.

Shrink wrap machine for boxes is widely used, the heat tunnel and shrink machine are suitable for all products that need heat shrinkable. After the products come out of the shrink machine, it enters the heat tunnel directly. The size of the heat shrinking tunnel is determined by the size of the products. In general, the heat shrinkable tunnel is larger in size and higher in price, if the machine you need needs to be customized, then its price will be higher than the standard model.

Model	CK-120
Max Film size	≤590mm
Packing size	L:60mm-320mm
	W:10mm-200mm
	H:5mm-35mm
Packing speed	30-150 (bag/min)
Film type	PE;PVC;POF
Power consumption	3.6KW+16.5KW
Power supply	host:220V, 50HZ; Heat shrinkable machine:380V, 50HZ
Envelop dimensions	5000x1105x1450mm
Shrinking machine	2400x600x1700mm
Weight	1600KG
