

Moon Cake Rigid Thermoformer Machine

The Rigid film thermoformed is designed for maximum output and mostly used in food and medical industry. The normal package form for this machine is rigid tray, plate and deep bowl.

Features:

- High efficiency, at least 10000 packages per day.
- Safe and easy to operate with PLC touch screen operating system.
- Outstanding packaging with customized forming mold and functions for automated packaging.
- Provide full after-sale service, engineers are able to service overseas.

Moon cake Pack:

Rigid package is a good protection for the moon cake. Keep a better shape and better to eat while opened. Rigid package can be stored in order. And easy to carry. The rigid package also can be used as a container for the date which no longer require a bowl or other container to hold.

Thermoforming Technology

Advanced thermoforming technology can increase packaging production speed and package quality. It use compressed air and vacuum to help heated film form into different shapes. The bottom mold is totally customizable.
