

Automatic Heat Seal Shrink Wrap Machine LGQL-5538

With advanced technology, the machine has stable function in packaging and low price for sale, automatic shrink wrap machine is widely used to pack whole cases of mineral spring water bottles, juice bottles, milk bottles and other products. PE film shrinkage packaging technology is adopted to perfect the packaging of goods.

The whole production process of the machine adopts foreign advanced technology. The main parts are products of famous international companies, which can greatly improve the performance of the machine and ensure its long-term stability.

Advantages

1. Automatic shrink wrap machine is equipped with imported electrical components from abroad, which can effectively guarantee the temperature of the machine performance and, to a certain extent, extend the service life of the machine.
2. The stainless steel heating element adopted by the machine can realize rapid heating and effectively improve production efficiency.
3. The machine adopts imported heat insulation curtain, which can greatly reduce the loss caused by heat loss, save electricity and save production cost.
4. The machine is equipped with large power fan motor to ensure the wind force during operation.
5. Heat seal shrink wrap machine system is easy to operate, and only one operator is required to complete a series of operations, which can save the company's labor force and facilitate the work.
6. This machine can adjust the conveying speed and indoor temperature. The machine can adjust the speed and temperature according to the size and output of the packaging products to ensure the best shrinkage effect.
7. The machine can use a variety of packaging film, such as PVC, PET and POF film, to seal the product on the machine.

8. Automatic shrink wrap machine adopts solid roller conveyor, and the conveyor adopts anti-high temperature silicon pipe to withstand heavy objects.

9. The transmission speed and packaging speed of the machine are very fast, which greatly improves the packaging efficiency of bulk products.

Technical Data:

Sealing and Cutting Machine			
Model	LGQL-5538	Power	1.6kw,220V/50HZ,
Max Packing Size	450*270*330mm		
Packing speed	0-8 pcs/min	Pressure	5kg/square
Dimension	1020*830*1500mm	Weight	170KG
Heat shrinking Machine			
Model	LGBS-6040	Heating power	22KW
Max Size of Packing chamber		600*400*1500mm	
Dimension	2500*850*1400mm	Weight	1200*450*250 mm
