

Semi-Automatic Transparent Film Packing Machine YQSW-200

Application:

The packing machine is suitable for packing small boxes of products such as medicines, drugs, cigarette, tea boxes, pokers, perfume, condoms and so on.

Introduction:

The packaging machine is a Semi-automatic three –dimensional packing machine. Made of materials including BOPP film and PVC, the machine can apply to wrapping the products as a folding hexahedral single-box package. It is an ideal for the cassette packing cases. This machine is widely used in cosmetics, food, health products, medicine, condom packaging, agricultural and sideline products, audio and video products, culture articles, high-grade gift packages and other industries in various sizes of single-box type items three dimensional transparent film wrapping. It can feed by hand, wrapping, folding, side sealing, owning self-adhesive security features such as easy to pull.

Technical Characteristics:

The packaging machine we invented is in the absorption, digestion based on Germany advanced equipment, carefully designed and adapted. The packing machine we produced is characterized by its compact-sized, small occupying space, lightweight and without limit in packing area. One packaging machine can be packaged for different specifications (size, height, width) of the cassette packaging items due to its wide range of application.

Technical Parameters:

Packing Material	BOPP film and gold tear tape
Packing Speed	15~30 packs/min
Packing Size	L(40~250)×W(30~100)×H(10~80)mm
Electric Supply & Power	220V 50Hz 3.3kw
Weight	150kg
Overall Dimensions	(L)1500×(W)600×(H)1200mm
