

Automatic Straight Line Piston Filling Machine Liquid Paste Semi-Fluid Filling Machine CM-ZXHS

Suitable for liquids of different viscosities, semi-fluid, paste filling.

Function:

- The machine is easy to maintain, easy to remove, clean and install without any tools, and easy to adjust. Adjustment of metering can be made from a wide range to close metering before fine-tuning. It can achieve no bottle, no filling without bottle and accurate measurement.
- Considering the different viscosities of users, special equipments are provided with drip-proof and wiredrawing filling stuffing valves and submerged filling upgrade system. In order to make the discharging accurately align with the bottle opening, a transverse alignment device is designed to ensure the alignment accuracy.
- Configure automatic feeding structure for convenience and speed.

- The clamp type quick-fit hygienic joints are used in the filling system of this machine. The entire cylinder block can be easily disassembled, cleaned and installed from top to bottom without tools. Simple structure design, convenient operation and maintenance.

Advantages:

- Configure front-line imported accessories to ensure the stability of the equipment.
- Specially equipped with drip-proof and wiredrawing filling stuffing valves and submerged filling upgrade system.
- In order to align the discharging accurately to the bottle opening, a transverse alignment device is designed to ensure the alignment accuracy.

Technical Parameters:

Product Parameter			
Applicable bottle specifications	φ20~φ120mm	Bottle height	100-250mm
Power supply	220V 50Hz	Production capacity	3500~ 5500 bottles/hour
Electric power	≤1Kw	Required compressed air pressure	0.4~0.8MPa
