

DPXB/40B-F Thermoforming Vacuum Machine

The DPXB/40B-F is the ideal vacuum packaging machine for the food industry production of superior thermoformed packages. It was projected according to the most severe hygienic requirements and using the most modern technology.

One of the main features of the DPXB/40B-F is the on-the-touch tool change: on request, two different molds can be installed in parallel (including suitable formats) and can be switched "on-the-touch" via the intelligent PLC control. No need for complex tool and film changes during production - this saves time and reduces costs.

Features:

- Fully stainless steel machine.
- Automatic motion of the working station.
- Dual molds for easy format change by "on-the-touch"
- Sealing die lifts up automatically during machine stops or pause
- Long machine advance.
- Various cutting systems.
- Robust, versatile and easy to use. Especially suitable for food applications, industrial-duty blisters and pharmaceutical products.
- Thermoforming vacuum machine that adapts to all kind of accessories: double additional reel, slicers, dosing units, labelling...
- Up to 560 mm width
- Repeat length up to 700 mm
- Depth up to 150 mm
