

## ZHJ-80/120/150 Automatic Cartoning Machine

This machine is suitable for packing blisters, tubes ampoules and other related objects into boxes intermittently. The highest speed can be up to 150 boxes/min. It has the advantage of high packing efficiency and good quality. This machine can fold leaflets, open boxes, insert blisters into boxes, emboss batch numbers and close boxes automatically. It adopts an inverter to adjust speed, a human-machine interface to operate, PLC to control, and photoelectric sensors to monitor and control each

station automatically, so that once something unexpected happens, it will stop and display the reasons automatically, which can solve the troubles in time. This machine can be used separately and also can be linked together as a production line. Note: this machine can also be equipped with a hot melt glue device to do hot melt glue sealing for boxes.
