

## *CT – Model SLP-25 Horizontal Case Packer*

The SLP-25 all-in-one design provides automatic cases forming and advancement towards loading area. Stacked product is loaded automatically by a servo-driven inserter. Full cases are then transferred for top flaps closing and bottom/top sealing. The system is designed to run various products and can accommodate a wide range of case sizes and pack patterns due to the universal automatic product-collating system. The SLP-25 features an all-in-one compact design and assures minimal downtime. It provides flexibility, versatility, quick and easy changeover and high performance while requiring minimal capital investment.
