

Multi Line Liquid Packing Machine - LDL160

The multi line liquid packing machine is widely used to pack liquid in stick bag by multi line. The process of measuring, bag-making, filling, sealing, printing and cutting can be done automatically

Various Laminate Film, for example: Polypropylene / Polythene, Polyester/Aluminum foil/Polythene, Polyester/Aluminum-plating/Polythene, Nylon/ Polythene, Polyester/Polythene, etc.

The granule material is including honey, shampoo, juice, ketchup etc.

1. Adopts CPU to control each function states, and setup the man-machine conversation interface.
2. The Double channel temperature of the horizontal and vertical is controlled by intelligent temperature controlling device.
3. Intelligent photo cell orientation, transform discretionarily between the light/shade. Strongly anti-jamming, when two bags can't catch up with the upper mark the machine will stop and give an alarm.
4. The packaging speed of multi line liquid packing machine can be adjusted continuously within specified range. Orientation open mouth and stop.
5. The bag-making has high precision. Easily Operation and maintain.
6. Measurement adopts adjustable cup method, which is accorded with the national measurement standard.

Technical Parameter:

pouch length	40-120mm
pouch width	20-100mm
pack speed	200-400 bag/min
filling capacity	1-50ml
sealing style	Back side
measuring method	pump
consumption power	5.2kw/220 or 380V
dimension	1300mm*1700mm*2500mm
weight	500kg
