

Fluidocap 1000

Fluidocap 1000 is a semi-automatic liquid encapsulation and band-sealing lab model. With a solution like Fluidocap 1000, formulation scientists will have the flexibility to quickly develop formulations from the small quantities of drug substances available to them. It will also drastically reduce the time taken by scientists for testing these drugs for stability and other criteria. Its small footprint and robust build are ideal for pharmaceutical applications.

Features

- Output of up to 1,000 capsules per hour
- Compact filling and sealing equipment
- Higher yield of formulation with precision servo mechanisms
- Mechanisms to handle 80 cps to 80,000 cps formulations including pastes, hot melt and thixotropics
- Band sealing in order to aid integrity of dosage form, provide brand distinction and enhance shelf life
- Flexibility to fill and seal gelatin as well as HPMC capsules
