

RJWJ-115 Softgel Production Line

Soft gelatin encapsulation line is suitable for filling a certain amount of prepared medicine solutions into two lines gelatin sheet and forming soft gelatin capsules or balls with various size, shape and color after compression under the action of one pair opposite movable moulds.

Introduction

Soft gelatin encapsulation line is suitable for filling a certain amount of prepared medicine solutions into two lines gelatin sheet and forming soft gelatin capsules or balls with various size, shape and color after compression under the action of one pair opposite movable moulds. It consists of a compression system, gelatin melting system, raw material compounding system, shaping and drying system, cleaning system, recycling system etc. During gelatin compression and forming, it can be finalized within the sealed cavity so as to avoid coming across medicine oxygenation. All material contact parts are made of S.S. 316L in full compliance with "GMP" standard requirements.

Specifications

RJWJ-115			
Shape	Model	Mould cavity	Capacity of the medium speed(Pill/Hour)
Oval	4	114	17100
	8	85	12750
	20	52	7800
Oblong	4	86	12900
	8	64	9600
	20	48	7200
Round	8	82	12450
